

GSM ProtectProperty

NEXT GENERATION SECURITY SOLUTIONS

- Are you going for vacation or away on business trip?
- Would you like to know if your home and your property are safe in meanwhile?
- Would you like to know exactly when intrusion into your home or office happens so you can contact your security or police immediately?
- Would you like to check if everything is OK in your bar, restaurant, shop, warehouse, ... whenever you feel like it ... and all this again with your mobile phone when you are absent taking other urgent things?
- Are you looking for low-cost efficient security solution for your property, ... while mobile in your car, on lunch, on your vacation, business trip...?

*If your answers are YES, then our answer for you is **GSM ProtectProperty** solution which will enable you just that!*

What is GSM ProtectProperty solution exactly? It is a specially designed module with basic GSM functionality and camera, which can send upon triggered alarm (detection of movement) or on user demand picture to your mobile phone wherever you are. It is composed of three main components. First one is GSM ProtectProperty Module, which is physical unit you will mount on wall facing direction where you expect most movement or would like to observe. You must insert a SIM card from your preferred mobile operator and plug GSM ProtectProperty Module into electricity. Next component is a GSM ProtectProperty Software, which must be installed on your mobile phone, which is third and final component of system. After software installation you will set GSM ProtectProperty Module in a simple manner with your mobile phone and system is ready to use.

It is as simple as it is explained! No headache with installation, no complex user skills needed! All that you need is just GSM ProtectProperty Module, a SIM card from your mobile operator, 5 minutes to physically install module, our software installed on your phone and that is it – you are ready to protect your property properly!
